(54) **Lifesaving collar-armlet with radio signalling**

(57) A system of biological sensors, equipped with a radio transmitter, which is placed on an armlet, collar or directly on the patient and which analyses some physiological parameters of the same patient.
 The analysis of the correlation of the variations of such parameters allows the recognition of:

- Shock phenomenon in its initial situation
 - Physiological alterations

and consequently activates all the mechanisms necessary for the safety of the patient, or of what it controls, by a codified alarm, radio transmitted or locally generated.

European Patent
Office

DECLARATION

Application Number

which under Rule 45 of the European Patent Convention EP 01 83 0093 shall be considered, for the purposes of subsequent proceedings, as the European search report

The Search Division considers that the present application, does not comply with the provisions of the EPC to such an extent that it is not possible to carry out a meaningful search into the state of the art on the basis of all claims

CLASSIFICATION OF THE APPLICATION (Int.Cl.7)

A61B5/00

Reason:

In view of the large number of independent claims and also the wording of the claims presently on file, which render it difficult, if not impossible, to determine the matter for which protection is sought, the present application fails to comply with the clarity and conciseness requirements of Article 84 EPC (see also Rule 29(5) EPC) to such an extent that a meaningful search is impossible.

Further the application does also not meet the requirements of clarity according to Article 84 EPC in the following respects:

The features of the claims are described in terms of desired results (effect or field of usage) and their function rather than in structural terms or by process parameters.

Further the terminology (see Rule 35(13) EPC) and the subject-matter of the claims lack support by the description (Article 84 EPC), which should use the same wording and be the basis for every claim.

It is unclear if the claims 3- 12 refer to a physical entity or an activity, to an apparatus or a method, therefore also the category of the claims is not clear.

Again, this lack of clarity in the present case is such as to render a meaningful search over the whole of the claimed scope impossible.

Consequently, no search report can be established for the present application.

The Search Division considers that the present application, does not comply with the provisions of the EPC to such an extent that it is not possible to carry out a meaningful search into the state of the art on the basis of all claims

CLASSIFICATION OF THE APPLICATION (Int.Cl.7)

Reason:

The applicant's attention is drawn to the fact that a search may be carried out during examination following a declaration of no search under Rule 45 EPC, should the problems which led to the declaration being issued be overcome (see EPC Guideline C-VI, 8.5).

摘要(译)

一种生物传感器系统，配备有无线电发射器，放置在臂，衣领上或直接放在患者身上，并分析同一患者的一些生理参数。对这些参数变化的相关性的分析允许识别：在其初始情况下的冲击现象生理变化并因此通过编码警报，无线电激活患者或其控制的安全所需的所有机制。传输或本地生成。
